April 6, 1988

The Foreign Agricultural Service of the U.S. Department of Agriculture today reported the following developments in world agriculture and trade.

GRAIN AND FEED

EUROPEAN COMMUNITY Proposes Subsidizing Grain Use in Feed Compounding. As part of its price policy for 1988/89, the European Community (EC) has proposed a new processing subsidy designed to stimulate grain use in compound feeds. Although implementation might reduce surplus supplies of grain available for export, it also would hurt demand for imported non-grain feed ingredients (NGFI), particularly U.S. corn gluten feed. Under the proposal, feed compounders would receive a subsidy representing the difference between grain market prices and the much lower imported NGFI prices. The subsidy, however, would only be applicable to the additional grain used above that normally compounded during a specified time frame. In recent years, compound feed use has stagnated at about 97 million tons annually; the grain component has declined as NGFI use has expanded. The EC is now importing some 15 million tons of NGFI annually--over a third or nearly 6 million tons comes from the United States. Although the EC is committed to importing about 5.5 million tons of manioc from Thailand for each of the next several years, a shift from NGFI to grains would likely affect industrial by-products (corn gluten feed, citrus pulp, wheat milling by-products), the bulk of which comes from the United States.

OILSEEDS AND PRODUCTS

INDIA Will Not Import Oilseeds Despite Industry Lobbying. An Indian official was quoted in the press as saying that the government did not favor oilseed imports as it was not economical. Industry representatives claim the government has gone back on earlier assurances that the National Dairy Development Board would be eligible for imports of 500,000 tons of oilseeds, and that 1 million tons would be imported to make up for the short kharif (fall) oilseed harvest--to relieve idle crushing capacity.

Observers believe that at the present time it would be inopportune to press for oilseed imports, in spite of industry opposition, since the rabi (spring) oilseed crop (mostly rapeseed and peanuts) is currently being harvested and any oilseed imports before June would hurt oilseed growers. However, the State Trading Corporation reportedly is considering imports of 30,000 tons of rapeseed.

DAIRY, LIVESTOCK AND POULTRY

EC Beef Stocks Increase. Intervention stocks of beef in the European Community (excluding Luxembourg) have increased 38 percent over 1987 levels. As of the end of February 1988, stock levels were at 670,286 tons. In contrast, intervention stocks were at 485,568 tons in February 1987.

The imposition of EC dairy quotas has had a significant impact on the increased availability of beef. EC beef imports in 1987 were relatively stable; however, it is expected that imports of beef will decline markedly in 1988. Thus, large EC stock levels and reduced imports will limit gains in world beef prices.

Intervention purchases in January 1988 declined to a level of 24,000 tons--the lowest monthly purchase level since April 1985. The main reason for the decline is that forequarter beef is in demand by the processing industry.

EC Boosts Export Subsidies in Response to U.S. Poultry EEPs. The EC Poultry Management Committee raised export subsidies to record highs for countries importing poultry meat from the United States under the Export Enhancement Program (EEP). Effective March 21, the EC Commission raised export subsidies by 20 to 32 percent to reach an average level of about US\$722 per ton. The new subsidy covers Saudi Arabia, the Gulf States, Egypt, Iraq, Singapore and the Canary Islands--countries already importing U.S. chicken under the EEP.

FRUITS

TAIWAN'S 1987/88 Citrus Production At New Record. Citrus production is estimated at 458,357 tons, up 18 percent from 1986/87 due in part to typhoon damage last year, according to the American Institute in Taiwan. For 1988/89, production is projected to be down slightly to 430,000 tons. The sharp rise in production caused prices of domestic oranges to fall 30 percent and grapefruit, 50 percent in 1987.

WEEKLY EXCHANGE RATE DEVELOPMENTS

By April 1, the U.S. dollar had fallen to its lowest level since early January against the Japanese yen. The dollar drop on March 31 was prompted by growing speculation of heavy dollar sales in Japan's new financial year. The British pound climbed against major currencies after the government reaffirmed its commitment to holding down inflation. Recent indicators suggest the U.S. economy is growing at a faster pace than was expected earlier. Consumer prices rose modestly in February, suggesting that inflation was under control.

TRADE LEADS

Beginning April 8, the Journal of Commerce, a daily newspaper published in Washington, D.C. for the U.S. business community, will begin publishing trade leads on market opportunities for U.S. agricultural exporters whenever they become available.

Each year, the FAS receives about 4,000 trade inquiries from overseas firms that seek to buy or represent U.S. agricultural products. Up until now, these leads have been disseminated by FAS to subscribers through the mail, and published electronically by EDI, a subsidiary of Martin Marietta Corporation. The Journal of Commerce's interest in publishing these trade leads will provide a faster means of communicating with exporters who cannot access trade leads electronically, and will also make these leads available to a wider audience.

The Journal of Commerce already publishes notices of export sales opportunities for nonagricultural products which are generated by the U.S. Department of Commerce. The inclusion of agricultural trade leads means that the U.S. export community will be able to get trade leads for agricultural and nonagricultural products from a single source. The Journal of Commerce will be accessing the agricultural trade leads through EDI--it will not have any exclusive rights or time advantage in getting the trade leads.
